

Press Release:

Flange Lever

Steck Manufacturing Company has released another winning tool: The **Flange Lever** (P/N 20037) will quickly access hard to reach damaged frame flanges, door and hood edges as well as radiator supports to bring back to proper edge alignment.

Unique double ended reverse "hook" design made from hardened alloy steel gives the technician easy access to buckled metal edges. Flat hook allows for easy manual alignment while the 35° angle bar allows technician to access areas like radiator supports. Flange Lever design allows for technician multiple angles to gain hand clearance for flat and/or angled pulls while using the body of the tool to provide maximum leverage for manipulating the damaged flange or panel edge.

Labor/Material Savings: Quick movement along the damaged area allows for multiple metal manipulations without needing to unlock and relock locking pliers used today to perform flange repairs.

This timesaver kit sells for a mere \$22.50 Part Number: 20037
