

SATA® adam™ 2 -  
Precise pressure adjustment for perfect results

The SATA adam 2 displays the spray gun inlet pressure with an accuracy of +/- 0.05 bar. The pressure can be **precisely adjusted** via the easily accessible regulation wings. All SATA paint spray guns equipped with an air micrometer can be retrofitted with the SATA adam 2. Thus, painters can keep the **pressure always under control** to ensure precise color matching and **high quality finishes**. Costly rework due to incorrect pressure setting is a thing of the past. The display always remains in the horizontal center position ensuring **perfect readability** of the pressure at all times.

### New Design – High Flexibility

The SATA adam 2 consists of two separate components: Adam 2 “dock” and “display”.

The **SATA adam 2 dock** permanently replaces the air micrometer of the spray gun, allowing the precise adjustment of the inlet pressure. The second component, the **SATA adam 2 display**, is safely fitted to the “dock”. It is equipped with high-precision measuring electronics and can be removed from the spray gun in no time at all; for example you can use it on another spray gun with a pre-mounted “dock” or when putting it in a gun washer. Thus, the SATA adam 2 is a **truly versatile piece of equipment**.
